

# Chloramines Removal Filter

Use of chloramines to disinfect water by municipal water treatment plants is very common today. However, the use of chloramines leads to taste and odor issues. Also, the chloramines must be removed from water used in the production of soft drinks and fisheries.

Watergroup's Chloramines Removal Filter uses a special catalytically enhanced carbon media which efficiently removes the chloramines from water. Regular granular activated carbon media has less catalytic activity which will only partially remove chloramines from water. Controlled laboratory testing provides evidence of high chloramines removal capacity of the special media used in our products.

Watergroup's chloramines removal filter system has been designed to achieve effective and efficient removal of chloramines from water.

## Features

- Heavy duty fiberglass resin tanks
- Catalytically enhanced carbon media for chloramines removal
- 2510 Control valve for maximum backwash
- Designed for simple operation and service

## Specifications

Item Number	Model Description	Media cu.ft	Recommended * Flow Rate USGPM	Mineral Tank Size inches	Backwash usgpm	Installation Space WxDxH inches	Shipping Weight lbs
3995	CLF20	2	Up to 5	14 x 50	10	15 x 20 x 57	128
3996	CLF40	4	Up to 10	16 x 65	15	17 x 20 x 72	190

\* Recommended flow rates are critical to filter performance

Maximum Water Temperature = 110°F (43°C)

Maximum Operating Pressure = 100 PSIG (689 kPa)

- At the stated flow rates, the pressure drop through these devices will not exceed 15 psig.
- The manufacturer reserves the right to make product improvements which may deviate from the specifications and descriptions stated herein, without obligation to change previously manufactured products or to note the change.
- Chloramines removal capacity will depend on a variety of factors including influent chloramines concentration, pH and other factors, thus periodic sample testing is required.
